

Project Title: Church View
Description: Construction of a Contemporary Timber Framed Family Home
Client: Private Client
Value: £0.4M
Duration: 6 Months

Combining the latest, renewable energy sources, such as photo-voltaics and air-source heat pumps, with sustainably sourced building materials, this contemporary, Scandinavian style house is a visually stunning, ultra-efficient, practical family home.

A fusion of the modern and the traditional; the house is of highly insulated timber frame construction, with aluminium framed windows and doors, zinc roof coverings and Parex external render. In contrast, these elements are softened by the use of sweet chestnut cladding, ash flooring and bespoke, hardwood joinery items.

This project will be nominated for a number of regional and national construction awards.
